Art Unit: 3727

1. Claims 1-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention as previously set forth.
2. Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

“said overlapping” has no antecedent basis. Furthermore, it is unclear what is overlapping the disc.

3. Claims 10-13, and 15-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over LaFever (4412644) in view of Forman (4679693). LaFever teaches a container having a disc 13 having an aperture, a tab extending across the aperture having connection portion coupled to the disc, a grip portion 23, and a locking portion by the engagement of portion tab 23 in to the wall as shown in fig. 3.

Regarding claim 16, LaFever meets all claimed limitations except for the tab having perforation. Forman teaches that it is known in the art to provide a tab with perforations. It would have been obvious to one of ordinary skill in the art to provide perforations in LaFever as taught by Forman to provide security.

Regarding claim 10, Forman teaches that it is known in the art to provide a tab with perforations about portion 40 and resealable material (col. 3, ln. 40). It would have been obvious to one of ordinary skill in the art to provide the tab with resealable adhesive to provide added to enable one to reuse the container easily.

Regarding claim 11, note the paper tab (col. 2, ln. 4).

Art Unit: 3727

Regarding claim 12, it is noted that the resealable adhesive in the combination of LaFever and Forman would have the intended functionality.

4. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over the LaFever rejection, as set forth above, and further in view of Hambleton (4673126). To the degree it is argued that LaFever does not teach the overlapping. It would have been obvious to one of ordinary skill in the art to have the sidewall overlap a portion of the disc to keep the disc in place.
